## With Hot Stapler come backs are a thing of the past.

Be confident in your plastic repairs by joining the two broken parts with stainless steel staples. The different staple designs allow you to securely fasten many types of breaks.

<b>Model No:</b>	HS2009C-N
<b>Power Source:</b>	AC120V
<b>Power Consumption:</b>	10.8W
<b>Dimensions:</b>	W 170mm / 6.6" x H 110mm / 4.3" x D 90mm / 3.5"
<b>Length of Plug Cable:</b>	1680mm / 66"
<b>Length of Grip Cable:</b>	1680mm / 66"
<b>Weight:</b>	1420g (50.1 oz)

### Applicable Objects

#### Bumper & Grill

#### Other Plastic Parts

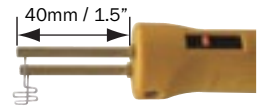

#### Body & Cowling

### Usability Improvement

Longer tips improve accessibility.

Staples can be set vertically or horizontally for improved function.

### Procedure (Application for Headlight)

1. Clean around the part where it is broken.

2. Put the broken part to the original place with your hand. And weld the pin into the plastic.

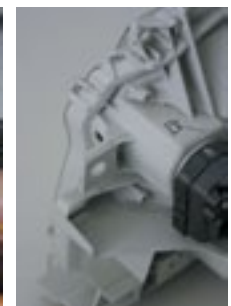

3. Release the switch of the grip for 10-20 sec, then take the grip away from the pin.

4. Weld more pins over the crack, if necessary

5. Cut the excess part of pins with the clipper.

6. This is it.

## Pre-cut staples do not require cutting after setting.

They easily break off below the surface of the plastic at the pre-cut point.

### HI QUALITY STEEL STAPLES
